PERSONAL PROJECT

❖ Email & Phone Hunter – Domain-Restricted OSINT Crawler (Windows & Linux)

- User enters a target domain, and the tool crawls only pages within that domain (internal links) to stay in scope.
- For each page, it sends HTTP requests, parses the HTML content, and searches for email and phone patterns using regular expressions.
- Extracted contact details are cleaned, de-duplicated, and saved into a structured output file (e.g., CSV/Excel) for easy use in OSINT, lead generation, or security analysis.

❖ Multi-Branch Company Network

- Built and configured a simulated network connecting head office and multiple branches via routers and WAN links.
- Used VLANs and inter-VLAN routes to separate departments and control internal communication.
- Applied basic security (SSH, passwords, ACLs) to protect management access and sensitive traffic.

❖ **Online Store – Mini MySQL Project**

- Built a MySQL database for an online store with tables for products, customers, and orders, using proper keys and relationships.
- Wrote SQL queries to handle orders, manage inventory, and generate basic sales reports.
